EDUCATION

Course	University/School	Year	CGPA/%
B.Tech (Mathematics and Computing)	Delhi Technological University	2026	8.64
CBSE (Class XII)	Delhi Public School, Rohini	2022	95.6%
CBSE (Class X)	Delhi Public School, Rohini	2020	95.0%

INTERNSHIPS

AI Engineer Intern | NTT DATA Business Solutions

- Built a one-click, **LLM-driven data pipeline** that ingests CSV/SQL data and uses **LangChain** to decide tool usage based on content and structure, reducing manual data entry by over **70%**.
- Used **E2B Sandbox** to generate and execute Python scripts in real time, enabling intelligent analysis and cutting down data processing time from 1–2 weeks to under **30 minutes**.

Machine Learning Intern | BiUP.ai

- Contributed to end-to-end contextual voice-based workflows with structured data retrieval used by leading automotive brands including **Morris Garages, Skoda, and Volkswagen**, catering to **25,000 users** monthly.
- Built a cost-efficient **multilingual text-to-speech pipeline** using **StyleTTS2**, fine-tuned for over **12 Indian languages**, achieving **>95% cost reduction** compared to ElevenLabs.

ACADEMIC PROJECTS

CodeTracer: Coaching DSA problems through AI-based Visualization – UI | [GitHub](#)

- Built a production-grade **LeetCode alternative** with a real-time contest system using **Socket.IO** for live leaderboards, a full social layer (friend requests, presence, direct messaging), and secure C++ code execution via **Judge0** in sandboxed environments.
- Designed an in-built AI coaching agent that understands its users and dynamically renders **algorithm visualizations** (arrays, graphs, trees, linked lists...) through interactive React components.
- Implemented a **Web Worker**-based execution engine with a custom **Tracer class API** that runs visualization code in real-time driving animated playback with step-by-step navigation and instant seek.

GEEAnalytics: Environmental Analytics Powered by Google Earth Engine – UI | [GitHub](#)

- Built an **LLM-powered system** that dynamically generates **Google Earth Engine** code to retrieve location-specific time series data and answer spatially aware environmental queries.
- Integrated with **E2B Sandbox** for real-time code execution and used **React** and **Recharts** to render dynamic visual components, enabling live, interpretable insights within a responsive UI.

Restaurant Recommendation System – UI | [GitHub](#)

- Developed an app that generates restaurant embeddings from data (cuisine, ambience, etc.) through **Qdrant**, which dynamically adjusts recommendations based on users' feedback to refine results.
- Integrated fast similarity search with **HNSW** indexing and **SQLite** for efficient data retrieval; incorporated **Bayesian ratings** and budget preferences to deliver personalized recommendations.

POSITIONS OF RESPONSIBILITY

Core Member | Geek Room

Aug 2024 – Present

- Organised **10+** profitable hackathons, hireathons, workshops, and sessions, earning recognition for hosting large-scale, high-impact events.
- Contributed to the growth of Geek Room into a community with **100,000+** active coders nationwide.

TECHNICAL SKILLS

- Competitive Programming:** Achieved **1600+** rating; solved **400+** LeetCode, CSES, and Codeforces problems using C++
- Development:** Flutter, Node.js, Firebase, Riverpod, Flask, React, Git, Docker, Arduino Uno, PostgreSQL, PyTorch, OpenCV, Ollama, TensorFlow, Groq, Qdrant, neo4j, StyleTTS2, LangChain, LangGraph
- CS Fundamentals:** OOP, Linear Algebra, Probability & Statistics, Stochastic Process, Computer Networks, DBMS, Algorithm Design & Analysis, Computer Organization & Architecture
